

Automated End Stripe Applicator

ISCO End Stripe Applicator includes vertical mast and horizontal arm with six spray guns.

Designed for use with ACI Coatings

The **ISCO End Stripe Applicator** sprays product identification marks on the ends of units of panels or boards. This fast and accurate system is fully automatic. The typical system uses two applicators to stripe both ends of the unit simultaneously. The End Stripe Applicator can be used inside an automated coating spray booth or in stand-alone configuration. It is 100% compatible with ACI coatings.

Unique Purge Air System

Protected Spray Guns—gun enclosure and mast have positive air pressure, keeping guns and other equipment free of buildup.

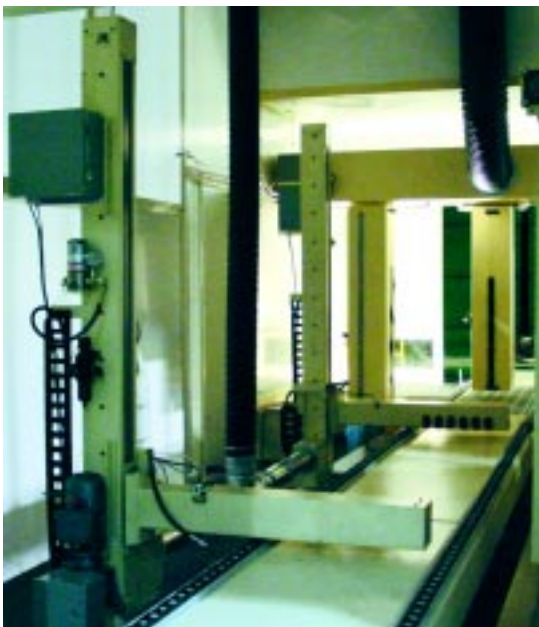

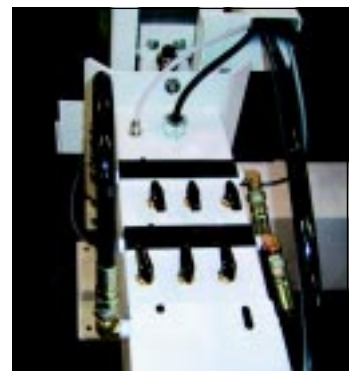

Variable Speed Drive

Selectable Up-Down Travel Rate—choose the setup to match your striping requirements and throughput rate.

Selectable Colors & Patterns

Every Color & Pattern You Need—six selectable spray guns with one-color, two-color and two-color quick-change options.

Spray gun controls are conveniently located on top of horizontal arm.

Two End Stripe Applicators installed in an ISCO booth.
