

Stencil Pro Automated Stencil System

Stencil Pro Automated Stencil System housed in ISCO booth.

Overhead drive is clear of residual coating material.

Dual articulating arms improve stencil alignment with side of unit.

Stencil spray guns housed in pressurized enclosure.

Large 4' x 8' stencil frame

Designed for use with ACI Coatings

The **ISCO Stencil Pro Automated Stencil System** provides fully automated application of ACI coatings on units of panels and boards. It can be used inside a spray booth or in stand-alone configuration.

Fast & Easy Stencils of the Highest Quality

Full 4' x 8' Plate—with up to four individually controlled guns for sharp, clear stencils.

Maximum Efficiency

Minimal Overspray—individual gun control with pre-programmed start/stop to target only intended spray areas.

Protected Spray Guns

Positive Air Pressure System—spray guns are protected in pressurized enclosure, keeping guns and other equipment free of buildup.

Individual Articulating Arms

Stencil Plate Positioned Tight Against Side of Unit—dual articulating arms can align stencil plate with misaligned units.

Optional Air Blast Stencil Cleaner

Blows Excess Material Off Stencil—helps extend life of stencil plate.

The complete ISCO Automated Coating Spray Booth with edge seal (right) and stencil-end stripe (left).
